

# Heifer Mineral

## Available in

50 lb Bag  
 PN # 115495  
 UPC 758364115495

Redmond Heifer Mineral contains a 35/65 blend of our premium sea minerals and volcanic conditioner and is fortified with added calcium, phosphorus, selenium, and vitamins A, D, and E. Heifer Mineral should be offered starting at weaning until the last trimester of their first pregnancy.

dairy cattle  
 1/3 lb. per head per day

smaller cattle  
 adjust in proportion to body size

## Simplify Your Mineral Program

Instead of calculating complicated mineral ratios, give your heifers everything they need from their mineral program with 1 easy product. Redmond Heifer Mineral has all their trace minerals, rumen conditioner, and fortifications measured, balanced, and ready to eat.

## Prevent Deficiencies

Heifers need extra minerals to help them as they grow to maturity and start their first gestation. This added supplementation will reduce the amount of minerals mobilized from their body stores to help with growth.

## Boost Immunity

Increasing your heifers' calcium, selenium, other trace minerals, and vitamins is the best step to guard against health disorders. Most north american soils are selenium deficient, so fortifications in their mineral program are needed to support immunity.

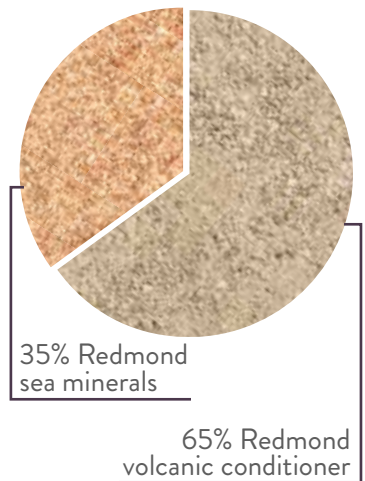

## Prepare for Pregnancy

Don't wait to step up your mineral program when gestation starts. Give your heifers extra minerals after weaning to prepare their system for better health, higher body condition scores, and more succesful breeding cycles.
