Selenium 90	Redmond salt + 6 trace minerals including 90 ppm Selenium	Free-choice, ration mixing
High Iodized	For pink eye	Free-choice during troubled times
Cattleman's PFS	For pink eye, foot rot	Free-choice during troubled times
Mineral Conditioner	Higher levels of each mineral, toxin binder, buffering agent	Free-choice during troubled times
SR 65 / SR 50	Conditioner + Salt SR 65 = 65% Conditioner SR 50 = 50% Conditioner	Free-choice, best mixed in rations
SR 65 / SR 50 MVP	Same Conditioner + Salt ratios as above plus fortified with vitamins and minerals	Free-choice, ration mixing

Block Products

Product	Description	Feeding Directions
Natural	Redmond Salt	Free-choice at all times
Natural with Garlic Natural + Org. Garlic	Helps repel flies, ticks, and biting insects	Start 2-3 weeks before fly season
Added Trace Mineral	Added copper, manganese, cobalt, iodine, and zinc	Free-choice at all times
Selenium 30	TM + 30 ppm selenium	Free-choice at all times
Selenium 90	TM + 90 ppm selenium	Free-choice at all times
Iodized	For pink eye	Free-choice during troubled times
Sulfur	Added levels of sulfur (3%)	Free-choice at all times
Cobalt Iodized	Added levels of iodine + cobalt	Free-choice at all times
Bison 90	Added selenium, copper, cobalt, manganese, iodine, zinc + molassas	Free-choice at all times

SPECIES FEEDING GUIDE

dairy cattle
grain fed beef cattle

Salt:
4 oz. per head per day
and/or free choice

Conditioner:
4-8 oz. per
head per day

beef cattle

Salt:
2-4 oz. per head per
day and/or free choice

Conditioner:
3-4 oz. per
head per day

smaller cattle

Salt:
Add in proportion to
body size or free choice

Conditioner:
2-3 oz. per
head per day

sheep + goats

Salt:
.25 - .50 oz. per head
per day or free choice

Conditioner:
0.5 - 1 oz. per
head per day

swine + poultry

Salt:
.5% of total feed

Conditioner:
1% of total feed
(20 lbs/ton)

FEEDING TIPS**

WHEN SHOULD I USE BLOCKS VS. LOOSE MINERALS?

- ✓ Reduce harmful boredom behaviors (cribbing, property destruction, self-biting, etc.)
- ✓ Easily increase your number of mineral stations for large lots and pastures

- ✓ Increase intake during weather stress or seasons of heightened activity (calving, breeding, etc.)
- ✓ Reduce pecking order bullying by spreading minerals out in larger stations or add feeders

HOW TO SWITCH FROM HEAVY MINERAL MIXES TO REDMOND

Start by offering Redmond 10 Fine or 4 Medium to your animals; most animals instinctively favor Redmond's higher salt to mineral ratio.

If they don't catch on right away, they are likely over-mineralized or hooked on the grain fillers and molasses enticers in the heavy mineral/low salt mixes.

Remove the heavy mineral mix for 2-3 weeks, re-introduce both options side by side. If they are still consuming a fair amount of the heavy mix try the next step.

Get a mix without enticers and offer next to Redmond Selenium 90 (which has the fortified ratios they need at a cheaper price than the heavy minerals).

Mix in Redmond Conditioner to improve digestion, increase feed efficiency, and get the most out of your mineral program (1:2 or 1:3 conditioner to salt ratio)
