

# REDMOND SILAGE PRESERVER

SR 65 slows spoilage and better preserves silage and haylage

Nature has it right™

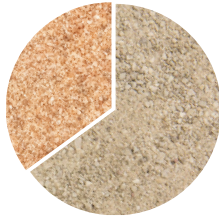

*Our blend of sea and volcanic minerals helped a farmer protect and preserve his stored haylage and corn silage from spoiling, reduce toxins, and improve feed quality*

## Introduction

Abner, a young Amish farmer, ran out of his normal bacterial inoculant. He had Redmond SR 65 available and applied at a rate of 5 lbs. per ton of silage in an upright silo.

### Redmond SR 65

65% volcanic conditioner  
35% sea minerals

## Application Instructions

- Apply dry, 1-2 lbs per ton mixed evenly depending on moisture content
- 1 lb per 10 sq ft on top of bunkers/piles

## Observed and Reported Improvements

### Lower Costs

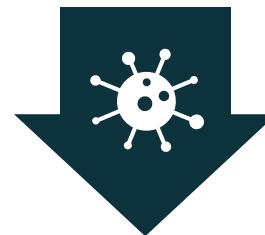

Reduced cost vs. traditional inoculant (50% less expensive)

### Improved silage quality

Once SR 65 treated feed ran out, butterfat rates dropped from 4.2% to 3.7%.

### Reduced Mold & Mycotoxin Levels

When used in piles and bunkers, mold levels were visibly reduced (even without a vapor barrier)

### Reduced Protein Loss

Protein loss by heat reduced
