

REDMOND 10 FINE WITH GARLIC

PRODUCT BRIEF

Remond 10 Fine with Garlic combines our full spectrum of sea minerals with the pest repelling power of garlic

• NATURAL PEST PREVENTION

Repels biting pests without losing efficacy like other pest relief products

• BOOST PRODUCTION/SAVE MONEY

A study conducted by the University of Arkansas, Fayetteville found that “in the United States cattle production losses due to horn flies have ranged from \$730 to \$876 million.” Whether your operation relies on cattle weight or milk production, horn flies alone can cause huge losses. Investing in fly repellent efforts will lead to beneficial weight gain, boost milk production, and increase the productivity of your operation.

• FIELD PROVEN BY EXPERTS

The Saskatchewan Department of Agriculture conducted an extensive field test on the effectiveness of garlic mineral salt for fly control. 3 herds, consisting of 150 cow/calf pairs each, were each given mineral salt, with 1 herd being fed garlic mineral salt. The garlic mineral salt group's fly count was about 55% lower than the control groups. They also noticed a lot less fly avoidance behaviors in the garlic group, whose animals were able to happily enjoy a lot more time grazing and resting.

PRODUCT FAQ'S

HOW DO I USE IT?

Offer free choice year round. Available in loose minerals or in block form. You can also mix with feed rations.

WILL IT TAINT MILK OR MEAT FLAVOR?

We get this question all of the time. We have never had anyone complain about a garlicky flavor in any animal that consumes 10 Fine with Garlic.
