

HEALTHIER DAIRY COWS

with REDMOND

Currently lactating cows tend to get most of the attention on a dairy farm. However, maintaining a trace mineral program during the dry and heifer stages supports healthy blood mineral levels and better prepares their bodies for gestation and lactation cycles.

THE REDMOND DAIRY COW PROGRAM

Redmond is proud to offer a selection of mineral and clay products that have proven benefits for helping dairy cows through all stages of life.

Birth - 2 Months

Newborn calves porous digestive systems are extremely susceptible to infection, acidosis, and dehydration. Protect them, and your budget, by investing in a calf immune stimulator before scours strike. Redmond First Month restores proper gut function with:

- Electrolytes and other essential minerals
- Probiotics to restore beneficial gut bacteria colonies
- Bentonite clay to bind to toxins and slow digestion rate for better fluid and nutrient absorption
- MOS (mannan oligosaccharides) to prevent pathogen growth and feed beneficial gut bacteria

Weaning - Last Trimester

Don't wait until gestation to step up your mineral program. Starting your weaned heifers on fortified trace minerals will protect them from deficiencies as they grow and mature to enter the dairy cycle. Redmond Heifer Mineral simplifies your mineral program by providing all their trace minerals, rumen conditioner, and fortifications in 1 balanced, ready-to-eat product.

Last Trimester - Calving

Dry cows especially need extra mineral supplementation because they can lose up to 50% of the absorptive area in their rumen during the first 7 weeks of their dry period. They are also more vulnerable to diseases and health problems like milk fever (hypocalcemia), retained placenta, and ketosis. Redmond Dry Cow Mineral increases their calcium, selenium, other trace minerals, and vitamins for better immune health and to prepare them for lactation.

Lactation - Dairy Production Cycle

It is easier and safer to prevent mineral deficiencies than to try and correct them, especially during the lactation stage. Giving your cows extra mineral supplementation during lactation reduces the amount of calcium and other nutrients mobilized and drawn out of their body stores. Add Redmond Vita-pac to our SR 65 blend to give your milking cows the building blocks they need to improve milk quality and production.

NATURE HAS IT RIGHT™

Redmond can simplify your mineral program and get you back to what you love about raising animals. Give us a call today!

Birth - 2 Months

REDMOND FIRST MONTH

Reduce death losses, treat scours, and lower vet costs with our highly effective immune stimulator for newborn ruminants.

Weaning - Last Trimester

HEIFER MINERAL

Prepare your heifers for production with our unique and delicious blend of sea minerals, volcanic minerals plus extra calcium, phosphorus, selenium, and vitamins A, D, and E.

Last Trimester - Calving

DRY COW MINERAL

Protect gestation health before calving with our unique and delicious blend of sea minerals, volcanic minerals plus calcium, phosphorus, selenium, and vitamins A, D, and E.

Lactation - Dairy Production Cycle

VITA-PAC

Add our special fortifications to Redmond SR 65 in your TMR to support lactation health and production.
