

REDMOND FIRST MONTH

PRODUCT BRIEF

Redmond First Month is a highly effective immune stimulator that can reduce death losses, treat scours, cut medical costs, and restore the health of your herd's next generation.

WHAT IS IN REDMOND FIRST MONTH?

REDMOND MINERAL CONDITIONER

Weathered volcanic bentonite clay (aka smectite, or montmorillonite) with 4 essential electrolytes and 60+ minerals.

PROBIOTICS

Carefully selected bacillus subtilis strains, for balanced gut microbe health.

MANNAN OLIGOSACCHARIDES (MOS)

Yeast cell wall derivatives that prevent pathogen growth and feed beneficial bacteria colonies so they can repopulate.

AVAILABLE IN

2 LB POUCH

5 LB BAG

10 LB BAG

TALKING POINTS

REDUCES CALF MORTALITY RATES

A study conducted by UC Davis School of Veterinary Medicine found that the smectite clay (used in First Month) reduced calf mortality rates by 63%

NATURALLY TREATS SCOURS

As a calf scours treatment, First Month naturally corrects the acidosis, dehydration, and loss of energy and nutrients caused by scours:

- Alkaline content to buffer acidosis and balance pH
- Replenishes lost electrolytes/salts
- Smectite clays slow the digestive passage rate to allow for better nutrient and fluid absorption into the blood
- Replaces microbe strains that are stripped/killed by scours

BOOSTS IMMUNE HEALTH

First Month helps protect calves when their immune system is at its most vulnerable:

- Redmond's clay conditioner has natural anti-microbial properties and inhibits pathogen growth without damaging beneficial *bacteria*.
- Mannan-Oligosaccharides (MOS) prevent harmful pathogens from attaching and colonizing in the intestines
- A study by UC Davis School of Veterinary Medicine found that Redmond's smectite clay (used in First Month) increases immunoglobulin and mineral levels in the blood.

RESTORES NORMAL GUT FUNCTION

Redmond First Month helps calves continue to grow and achieve weights by restoring healthy gut function:

- Protects gut lining
- Slows digestive passage rate so fluids and nutrients absorb
- Binds to harmful toxins for excretion not absorption
- Replaces and feeds beneficial digestive microbe colonies

PRODUCT FAQ'S

HOW DO I USE IT?

First Month powder mixes right into the milk or replacer you'll be feeding the calf. Mix 4 grams (1 tsp) into 2 quarts of milk, colostrum, or replacer per calf and stir thoroughly. Feed twice daily. Can also be used with electrolyte treatments for quicker recovery from scours.

HOW MUCH DOES IT COST?

Depending on location and shipping costs, Redmond First Month will usually cost around \$8-9 per calf in the first month of use.

HOW LONG SHOULD I USE FIRST MONTH?

You should use First Month for at least 1 month; 2 months is beneficial. This gets your calves past their most vulnerable health period and on their way to healthy growth into adulthood. For every 1lb of dry matter intake in the first 2 months of life, there are 18 more pounds of milk intake during the first lactation phase.
